

Search a company for Water innovation

Do not use tap water for washing is possible.

The water in the air exists is rain .

It is possible to wash the rainy days.

It is also possible to extract water from the air.

This water comes from the condensation of the air .

You noticed that the air conditioning of the house or the car emits water.

It is true that condensation does not produce enough water.

This little harvested water will be recycled.

Recycle and wash the water to extract dirt.

A shower 30 liters only consume ¼ liter of water.

The energy comes from solar panels.

The shower is contained in a large suitcase of 65 kg transportable by two men.

This shower is functional for three years.

This system is environmentally friendly.

No water intake in nature.

No water discharge into the environment , water is released as clean water vapor in the air.

No water transport network and not consumed energy.

No carbon footprint .

Military and nomadic inn are currently involved.

Independent house will no longer be connected to the water network or to the mains but the battery of electric cars or solar panels of the roof.

If you know a solid company that is looking for a rapid development with a product with high leverage, thank you to transmit this email .
